

Why Silvon: The Trusted BI Partner of Manufacturers & Distributors

Silvon stands apart in the world of Business Intelligence (BI) solutions by combining deep domain expertise and innovative technology tailored specifically for manufacturers and distributors.

Confused by all the BI and reporting tools on the market today? Discover why more than 2,000 customers rely on Silvon to enhance their data management and analytics ... driving better decision-making, operational efficiency and growth as a result.

DOMAIN EXPERTISE: DECADES OF INDUSTRY EXPERIENCE

A Focus on Manufacturing and Distribution

Silvon has dedicated its efforts to understanding the unique needs and challenges of manufacturers and distributors over the past 30 years. This focused expertise translates into our current Stratum BI solution, designed to meet the specific reporting demands of supply chain-centric businesses.

Packaged Interfaces for Major ERPs

The Silvon Stratum™ reporting solution is purpose-built to integrate seamlessly with all major ERPs and to enable our customers to easily customize their integrations to include data from other sources for their financial and operational analysis.

Reporting Assistance During ERP Migrations

Silvon offers significant experience helping customers migrate from one ERP solution to another while keeping their historical information intact within Stratum. This ensures that you will never have a gap in your trend reporting whenever you move to another ERP system.

Unique BI Roadmap and Methodology

One thing our customers will tell you is that Silvon's BI methodology is what really sets us apart. We take a strategic, evolutionary approach to deploying and extending analytics and reports across the business. This ensures that your most critical reporting requirements are addressed first, and that Stratum continues to grow with and adapt to your evolving reporting needs.

Consulting Services Delivered by Silvon Experts

Silvon's expertise is reinforced by our in-house solution experts who are committed to helping you get the most out of your investment in Stratum. We do not contract with high-priced 3rd-party consultants offering limited domain knowledge and experience to implement Stratum for you. Plus, when you partner with us, you'll have access to the same group of BI professionals on a day-to-day basis.

TECHNOLOGY: FLEXIBLE & COST-EFFECTIVE

A Modern Data Hub That Scales Across the Business

Silvon Stratum includes a built-in data hub that integrates, harmonizes and centralizes information from multiple ERPs and other data sources. The end result is a system of record that ensures accuracy, reliability and security for all of your analysis and reporting needs.

Driven by Business Users

Designed with business users in mind, Stratum provides simple interfaces and features that enable even non-technical team members to generate reports and access insights with ease. And for your business, that means more of your workforce can make data-driven decisions.

Pre-Configured Analytics and Reports

Stratum's pre-configured (yet simple to customize) analytics, KPI metrics and reports, save our customers a valuable amount of time and resources while eliminating complex, expensive development.

Built-In Planning Capabilities

Built-in planning is another key differentiator of Silvon's BI solution. With this capability, users can create sales budgets and plans based on the insights they uncover using Stratum ... and do so in a collaborative way using the same flexible interface.

Seamless Integration with Excel and Power BI

Stratum also integrates seamlessly with tools your team may already use, such as Excel and Power BI, allowing for efficient workflows and deeper dives into the data behind their visualizations.
